CC (GTF) B polypeptide having changes at position from 1448V, D457N, CC D567T, K1014T, D457N/D567T, D571K,ND57TK,CC D567T,D571K,ND14T, I448V/D457N,D567T/D571K/NT04T,CC D567T/D571K/NT04T,And K779Q or a GTF D polypeptide having CC planges at positions from T589D, T589E, N471D,T589E, Also included are a glucan produced by the GTF mutant, CC polypuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC polypuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC polypuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC promoter, a vector comprising the polypuclectide operably linked to a promoter, a vector comprising the polypuclectide operably linked to a promoter, a vector comprising the expression cassette, host cell promoter, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan in a plant transformed with a gene encoding a glucan in a plant. The method comprises transforming a glucan in a plant produce the glucan in the comprise plant cell under plant growing compositions to produce a regenerated plant and inducing expression of the comprising the glucan in a plant to produce the glucan in the vector is useful a comprise to produce a regenerated plant and inducing expression of the collymuclectide for a time sufficient to produce the glucan in the polymuclectide for a time sufficient to produce the glucan in the collymuclectide for a time sufficient to produce the glucan in the collymuclectide for a time sufficient to produce the glucan in the collymuclectide for a time sufficient to produce the glucan in the collymuclectide for a time sufficient to produce the glucan for the polymuclectide in the amyloplast of polymuclectide starch and latexes in paper mutant.

```

Glucosyltransferase B or D protein useful for producing a glus substitutes for and additions to modified starch and later paper manufacture, comprises mutations in specific positions a glucan useful latexes in

cc (GTF) Bollypeptide having changes at position from 1448V, D457N, D567T, K1014T, D457N/D567T, D57TK/KD14T, D457N/D57TK, D567T/D57TK, D567T, D567TK, D567TM, D5 Claim 36; Page -; 44pp; English. The invention an isolated protein comprising a glucosyltransferase on from I448V, D457N,

```
thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line of deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper of glucosyltransferase B or D enzyme, wild-type or mutant and a paper of comprising the glucan (paper sizing/coating agent): The vector is useful of plant cell with the vector, growing the plant cell under plant growing of the plant growing the plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from the controphyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical efficients, paper condically produced input materials, is more cost-effective and convironmentally friendly. Moreover, glucans also exhibit thermoplastic correspondent and impart alons to the naner during coating step.

The present sequence represents a GTFD mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFD sequence appearing as AAU98029 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

CC (GTF) B polypeptide having changes at position from I448V, D457N, CC (GTF) B polypeptide having changes at position from I448V, D457N, CC D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, CC D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K779Q/K1014T, CC D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K779Q/K1014T, CC P169A/Y170A/Y171A, and K779Q or a GTF D D91/PPDY1GE having changes at positions from T589D, T589E, M471D, M471D/T589D, and CC COMPAND/T589D, Also included are a glucan produced by the GTF mutant, CC polynuclectide, a ribbonucleic acid sequence encoding the GTF mutant, CC polynuclectide, a ribbonucleic acid sequence encoding the GTF mutant, CC polynuclectide, a repersising the polynuclectide operably linked to a promoter, a vector comprising the expression cassette, host cell coating composition comprising the expression cassette, host cell coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the filter of the glucan in starch biosynthesis, transformed with a gene encoding a glucosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan (paper sizing/coating agent). The vector is useful comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the conditions biphosphate carboxylase small subunit, waxy, brittle-1 and clucan in the more than the produce of the produce of the plant and placen in the plant produce the plant and placen in the place

Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and biologically friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFD mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFD sequence appearing as AAU98029 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Glucosyltransferase B or D protein useful for producing a glucan as substitutes for and additions to modified starch and latexes: paper manufacture, comprises mutations in specific positions

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in manufacture, comprises mutations in specific positions

Claim 36; Page -; 44pp; English.

CC (GTP) Be polypeptide having changes at position from 1448V, D457N, CC D5677, K1014T, D457N,D567T,D571K,K709CK1014T, CD567T,D571K,K014T, L448V/D457T,D571K,K709CK1014T, CD567T/D571K,K1014T, L448V/D457T,D571K/K709CK1014T, CD567T/D571K/K709CK1014T, CD567T/D571K/K709CK1014T, CD567T/D571K/K709CK1014T, CD567T/D571K/K709CK1014T, CD567T/D571K/K709CK1014T, CD567T/D589E, Also included are a glucan produced by the GTF mutant, CC N471D/T589E, Also included are a glucan produced by the GTF mutant, CC N471D/T589E, Also included are a glucan produced by the GTF mutant, CC na expression cassette comprising the expression cassette, host cell promoter, a vector comprising the expression cassette, host cell promoter, a seed or tuber from the transgenic plant, a paper sizing and/or cell with a gene encoding the mutant GTF, wild type or, starch, a latex, with a gene encoding the mutant GTF, wild type or, starch, a latex, cell ficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in paper disting the glucan in the vector is useful growing growing the plant and inducing expression of the CC deficient operatory deficient to produce the glucan in the polyment of the vector is the paper disting to modified starch disting the glucan The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N,

cc introduced with the vector, a transgenic plant, apaper sizing and/or vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising the with a gene encoding the mutant GTF, wild type or, starch, a latex, cy thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan (paper sizing/coating agent). The vector is useful comprising the glucan (paper sizing/coating agent). The vector is useful comprising the glucan (paper sizing/coating agent). The vector is useful conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Cc glucans are useful as substitutes for and additions to modified starch cc and latexes in paper manufacture. Unlike prior art techniques, which creating the glucan produced by GTF, which utilises to biologically produced input materials that produce chemical effluents, paper manufacture is not shown in the specification but cc properties and impart gloss to the paper during coating step.

CC The present sequence represents a GTFD mutant of the invention but was created by the indexer using the GTFD sequence appearing as AAU98029 and the information in claim 36.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence represents an alpha-D-glucosyltransferase from streptococcus salivarius. The enzyme is primer-independent, and produces soluble glucan from sucrose. A gene encoding the enzyme may be cloned and expressed in Escherichia coli using a subclone of phage lambda-Cl3, e.g. plasmid pGSG501 or plasmid pGSG502. The DNA may also be expressed in a transgenic plant, to improve the level of stored carbohydrate in a pasture plant which normally contains low levels, or to prevent degradation of stored carbohydrate during plant senescence. Dextran may be isolated from the plant, for use as a food binder or pharmaceutical additive. Primer independence ensures that the enzyme will be functional in plants. The glucan is poorly degraded in plants but easily degraded by bacteria in the rumen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI;

The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-JUN-1995;

coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line the glucan is produced in the amyloplast and/or vacuole or a maize line

```
cc deficient in starch biosynthesis, transformed with a gene encoding a cc glucosyltransferase B or D enzyme, wild-type or mutant and a paper cc glucosyltransferase B or D enzyme, wild-type or mutant and a paper cc comprising the glucan (paper sizing/coating agene). The vector is useful cf for producing a glucan in a plant. The method comprises transforming a cc plant cell with the vector, growing the plant cell under plant growing c plant cell with the vector, growing the plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the collymucleotide for a time sufficient to produce the glucan in the cc regenerated plant, where the vector contains a transit sequence from cr contains a transit sequence from cc conditions biphosphate carboxylase small submit, waxy, brittle-1 and cl is produced in the amyloplast of potato or the vacuole of sugar beet. CC Glucans are useful as substitutes for and additions to modified starch can dilatexes in paper manufacture. Unlike prior art techniques, which cr candifacture utilising the glucan produced by GTF, which utilises biologically produced input materials that produce chemical effluents, paper conjective and conjective and impart gloss to the paper during coating step.

The present sequence represents GTFB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  片

WPI; 2002-414332/44

manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTPB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU9802 and the information in claim 36. a glucosyltransferase on from I448V, D457N, appearing as AAU98027

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus Synthetic.
                                                                                                                                                                                                                           regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly. Moreover, glucans also exhibit thermoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 36; Page -; 44pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Glucosyltransferase B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   thermoplastic conclude or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line of glucan is produced in the amyloplast and/or vacuole or a maize line of glucan is produced in the amyloplast or glucan and a paper of glucosyltransferase B or D enzyme, wild-type or mutant and a paper of producing a glucan in a plant. The method comprises transforming a complication to growing in a plant. The method comprises transforming a complitions to produce a regenerated plant and inducing expression of the plymucleotide for a time sufficient to produce the glucan in the cripulose biphosphate carboxylase small subunit, waxy, brittle-1 and conforming a produced in the amyloplast of potato or the vacuole of sugar beet. Claucans are useful as substitutes for and additions to modified starch cardial produce dimplementally friendly. Moreover, glucans afficed starch conforming the glucan produced by GTF, which utilises converses and impart gloss to the paper during coating step.

Claucan produced by the indexer using the GTFB mutant of the invention but the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB seq length: 0
